will become simple.

(57) Abstract:

COPYRIGHT: (C)1987,JPO&Japio

PURPOSE: To make it possible to perform a central control of a plurality of air conditioners collectively with a simple construction by connecting a central control unit to one of the plurality of the air conditioners.

CONSTITUTION: A remote control switch 1 comprises a transmitter-receiver circuit 1a for performing transmission with an air conditioner 3 through a common bus 4, a control portion 1b, a switch group 1c for operation stop, space cooling/space heating, etc., and a display portion 1d for indicating the operational condition. The central control unit 2 comprises a central switch 2b, an operating switch 2c, a space cooling and heating changeover switch 2d, and a circuit 2a for transmitting the ON/OFF condition of the switch to an air conditioner 3. Remote control data transmitted from the remote control switch 1 is analyzed by a control portion 3b through a transmitter-receiver circuit 3c to operate or stop a compressor 3d and a blower 3e. According to this construction, since the remote control switch 1 can receive central control data from the central control unit 2 through one air conditioner 3 via the common bus 4, the construction

electrically controlled
air
conditioning
